

Website Specifications

Project overview

A Real Estate website that prioritizes customer preferences in housing and integrates them modern and traditional architecture. It also bridges societal housing gaps by providing a platform for non-profit housing company agents to connect with low-income individuals.

Objectives

The inauguration of a real estate website that aims at:

- Displaying trends in the housing market in the user's interest
- Providing housing companies with a platform to connect with potential customers
- Acting as a common ground between landlords and customers that aren't looking for permanent housing
- Addressing the intricacies of the house purchasing/rental process that exclude most people
- Lure in potential buyers and sellers through property inquiries, newsletters and mass media ads to lead generation
- Showcase property with the provision of detailed listings with photos and videos to surge buyer confidence
- Maintain client relationships through tools aimed at chat support and scheduling

Business goals in relation to real estate

A set of goals the business veers towards achieving in relation to real estate include:

- Website assumes the role of a 24/7 sales platform, widening coverage beyond offices to increase sales and revenue.
- Improve efficiency through automated listings, inquiries and updates to reduce operational costs
- Market expansion by including online presence to reach not only local target audience, but also national and international buyers.
- Retain competitiveness as per (Zillow premier agent) "A real estate business allows you to remain abreast with market trends and ahead of the competition."

- Intrigue investors with a well-structured site of professionalism, which plays a pivotal role in attracting investors and partners. As said by Venngage.

To support our objective and goals we have adopted strategic facts from well-established real estate businesses

- SMART Goals: As emphasized by FasterCapital, setting Specific, measurable, Achievable, Relevant and Time-bound goals for estate marketing, ensuring clarity and accountability should be necessitated.
- Performance Tracking: Zillow stresses the importance of “fluidity” in websites and business plans, which should be regularly updated to reflect market changes

Target Audience for a real estate website

1. Home Buyers

Demographics

- Age group: 23-55
- Income range: middle to upper-middle income brackets
- Motivations: first home purchase, relocation for work or personal matters, upgrading to larger properties for family

Publishing & Assurance

All html, css and js files behind the functionality of my website were all initially created on GitHub but my coding process took place in VS code. My repository was manually linked to VS code using git commands on Git Bash and all the changes I applied locally, I also pushed to my repository and synched the two.

cd path/to/my/folder -To initialize my repository

git init

git add index.html

git commit -m "Initial commit: Added simple HTML page – To add and commit my files

git remote add origin <https://github.com/my-username/my-repo-name.git> - Connecting my local repository to git

git branch -M main

git push -u origin main

My website is hosted and published on GitHub pages

Future Developments/Recommendations

My website currently does not use any CSS frameworks like Tailwind and Bootstrap that have built-in responsive grid layouts and utility classes due to my use of custom CSS maintained throughout the website and media queries to create a fluid CSS grid for my property list. Improvements would aim to address this and implement the use of these CSS frameworks to avoid strenuous work for other developers in attempt to duplicate/remake the website.

Implementing CSS rules and JS rules for my navigation bar to make it such that it disappears as users scroll to the bottom of a page and reappears when scrolling towards the top. It currently remains static regardless of the scroll behavior, which could obstruct the user's view when viewing properties.
